

OpenHRCore

Feature Specification — Full Module Catalog

An open-source, AI-native HRMS.
Conversation is the primary interface.
Companies bring their own policies.

Version: v0.1 planning document
Audience: project lead, contributors, future maintainers
Status: draft for build planning

How to read this document

This is the full feature catalog for OpenHRCore — every operation the system should eventually support, organized by module. It is not a v0.1 spec; it is the surface area to plan against. Each feature is tagged with a tier (core, std, adv) so you can decide what ships when.

Each module follows the same internal pattern. Every feature you see listed below maps to a service method, an HTTP route, and an agent tool. Three thin adapters; one source of truth in the service layer. This is the discipline that makes the AI integration cheap to maintain.

Architectural principles (recap)

Before listing features, four principles that shape every entry below:

- 1. The service is the system.** Every feature becomes a method on a domain service. The UI calls it through HTTP routes; the agent calls it through tools. Both adapters are thin; the service owns business logic, validation, permissions, events, and audit.
- 2. Agent parity with UI.** Whatever a user can do through the UI, the agent can do through chat — through tools that wrap the same service methods. No special paths, no elevated agent permissions. Permissions are enforced once, in the service.
- 3. Feature-first folder structure.** Each module owns its API, its service, its repository, its models, its schemas, and its agent tools — all in one folder. Vertical slices, not horizontal layers.
- 4. Audit is universal.** Every state-changing action records who, what, when, before, and after. The audit log is non-negotiable in HRMS — it is the legal record.

Tiering convention

Every feature is tagged with one of three tiers:

Honest note on scope

This catalog lists what a complete HRMS does, not what one engineer ships in one quarter. The full surface here is roughly 250 features. v0.1 is the core tier of admin, company, employee, and leave — roughly 40 features, each with three adapters (service, API, agent).

When you find yourself building a standard or advanced feature before a core one is solid, stop. The dependency order is real.

Module 1

Admin

Identity, access, and system-level configuration. The foundation every other module depends on.

Users

Account-level operations. A user is the credential and identity; an employee record (Module 3) is attached separately.

Tier	Feature	Notes
CO RE	Create user	Email + initial password or invite link.
CO RE	Read user	Self by default; others by permission.
CO RE	Update user profile	Email, name, locale, timezone.
CO RE	Deactivate / reactivate user	Soft state, preserves history.
CO RE	Delete user	Hard delete with cascade rules; rare path.
CO RE	List users	Filters, pagination, sort.
ST D	Reset password (admin)	Admin-initiated; emails reset link.
ST D	Change own password	Requires current password.
ST D	Forgot password flow	Tokenized email link, expires.
ST D	Force change on next login	After admin reset or policy trigger.
ST D	Account lockout	After N failed attempts; auto-unlock window.
AD V	SSO (SAML, OIDC)	Enterprise identity provider integration.
AD V	Multi-factor auth	TOTP, email, hardware key.

Tier	Feature	Notes
ADV	API tokens	Personal access tokens for integrations.

Roles

Tier	Feature	Notes
CORE	Create role	Named role with description.
CORE	Read / update / delete role	System roles cannot be deleted.
CORE	List roles	
CORE	Assign role to user	One user, many roles.
CORE	Revoke role from user	
STD	System-defined roles	Super admin, HR admin, manager, employee.
STD	Custom roles	Tenant-defined; permissions assigned freely.
ADV	Role hierarchy / inheritance	Senior HR inherits HR's perms.

Permissions

The permission model determines whether OpenHRCore can serve large companies or stays SMB-only. Start with RBAC (role-based); add resource scoping when needed.

Tier	Feature	Notes
CO RE	Permission catalog	Every action the system knows about.
CO RE	Attach permissions to roles	
CO RE	Effective permissions calculation	What can this user actually do.
ST D	Resource-scoped permissions	Manage my team's leave, not all.
AD V	Attribute-based access control	Rules over attributes, not just roles.
AD V	Permission delegation	Temporary grant during absence.

Sessions and authentication

Tier	Feature	Notes
CO RE	Login	Issues JWT (access + refresh).
CO RE	Logout	Invalidates the session.
CO RE	Refresh token	Short-lived access, long-lived refresh.
ST D	Session listing	Where am I logged in.
ST D	Revoke a specific session	Kill suspicious access.
AD V	Concurrent session limit	N devices per user.

Audit log

Why audit lives in Admin

The audit log is system-wide infrastructure, not a feature of one module. Every service writes to it; this module owns the schema, the retention, and the read interface. Treat it as non-negotiable from week one.

Tier	Feature	Notes
CO RE	Record state-changing action	Who, what, when, before, after.
CO RE	Read audit log	Filter by user, entity, date, action type.
ST D	Immutable storage	Append-only; no updates or deletes.
ST D	Retention policy	Configurable; respect legal minimums.
AD V	Export to SIEM	Syslog, JSON stream, S3.

System configuration

Tier	Feature	Notes
CO RE	Instance settings	Name, logo, default language, timezone.
CO RE	Feature flags	Enable / disable modules per deployment.
ST D	Email templates and SMTP	Configurable from admin UI.
ST D	Notification preferences (defaults)	Per-user overrides allowed.
AD V	Webhook configuration	Outbound events to external systems.
AD V	Integration credentials vault	Encrypted secrets for connectors.

Module 2

Company / Org Structure

The static structure employees attach to. Build the skeleton before populating it.

Company / legal entity

Tier	Feature	Notes
CO RE	Create company	Name, registration, tax IDs, address.
CO RE	Read company	
CO RE	Update company	
CO RE	List companies	Multi-entity setups.
ST D	Company branding	Logo, letterhead, color.
AD V	Multi-company support	Several legal entities in one instance.
AD V	Inter-company transfers	Employee moves with history preserved.

Departments

Tier	Feature	Notes
CO RE	Create department	With parent-id for hierarchy.
CO RE	Read / update / delete department	Delete requires reassignment.
CO RE	List departments	Flat and tree view.
CO RE	Department hierarchy	Parent / child relationships.
ST D	Department head	Pointer to employee.

Tier	Feature	Notes
ST D	Cost center linkage	For payroll allocation.
AD V	Matrix departments	Employee belongs to two.

Positions / job titles

Tier	Feature	Notes
CO RE	Create position	Title, description, default working hours.
CO RE	Read / update / delete position	
CO RE	List positions	
ST D	Position grades / levels	L1, L2, M1, M2.
ST D	Competencies	Skill requirements per position.
ST D	Reports-to chain at position level	Independent of named manager.
AD V	Succession planning	Identified successors per role.

Locations / work sites

Tier	Feature	Notes
CO RE	Create location	Address, country, timezone.
CO RE	Read / update / delete location	
CO RE	List locations	
ST D	Geofencing radius	For attendance check-in validation.
AD V	Office hours per location	Different open times per site.

Working hours and shift patterns

Tier	Feature	Notes
CO RE	Create working hour policy	Mon-Fri 9-5, 40h/week, etc.
CO RE	Read / update / delete policy	
CO RE	Assign policy to employee / dept / position	Resolution order documented.
ST D	Shift definitions	Morning, evening, night.
ST D	Rotating shift patterns	Weekly or monthly rotation.
AD V	Flexible work arrangements	Compressed week, WFH allowance.

Holiday calendar

Tier	Feature	Notes
CO RE	Create holiday	Date, name, country.
CO RE	Read / update / delete holiday	

Tier	Feature	Notes
CO RE	List holidays	By year, by country.
CO RE	Multiple calendars	Per country, per location.
ST D	Import standard country calendar	Bootstrap from a curated list.
ST D	Half-day holidays	Songkran morning only, etc.
ST D	Religious holiday variants	Per-employee observance.
AD V	Recurring rules	Nth Monday of month, lunar calendar.

Common master data

Tier	Feature	Notes
CO RE	Currencies	ISO codes, exchange rates.
CO RE	Countries	ISO 3166.
CO RE	Languages	ISO 639.
ST D	Banks	For payroll disbursement.
ST D	Tax authorities	Per country, per region.
ST D	Social security providers	Country-specific.
AD V	Custom dropdowns / picklists	Tenant-defined enumerations.

Module 3

Employee

The center of gravity. Every operational module attaches here.

Employee profile

Tier	Feature	Notes
CO RE	Create employee	Basic info + employment info.
CO RE	Read employee	Self always; others by permission.
CO RE	Update employee	
CO RE	Archive employee	Soft delete; preserves history.
CO RE	List employees	Filters: department, position, status, manager.
CO RE	Basic info	Name, national ID, DOB, gender, contact.
CO RE	Employment info	Hire date, position, department, manager.
ST D	Multiple addresses	Residential, permanent, emergency.
ST D	Emergency contacts	Multiple per employee.
ST D	Family / dependents	For benefits and tax.
ST D	Education history	Degrees, institutions, dates.
ST D	Work experience	Previous employers.
ST D	Skills and competencies	Tagged, searchable.
ST D	Languages spoken	Proficiency level.

Tier	Feature	Notes
ST D	Certifications	With expiry tracking.
ST D	Profile photo	Upload, crop, store.
AD V	Custom fields per company	Tenant-defined attributes.

Employment lifecycle

Lifecycle events drive everything else

Hire, promote, transfer, resign — these events have ripple effects in attendance, leave, and payroll. Model them as first-class events emitted by the employee service. Other modules subscribe.

Tier	Feature	Notes
CO RE	Hire employee	Creates employment record.
CO RE	Promote employee	Position change with effective date.
CO RE	Transfer employee	Department or location change.
CO RE	Change manager	Updates reporting chain.
CO RE	Resign / terminate	End-date employment; triggers offboarding.
CO RE	Rehire employee	New employment record, preserves prior history.
ST D	Probation tracking	With confirmation event at end.
ST D	Contract type	Permanent, fixed-term, intern, contractor.
ST D	Contract expiry alerts	Notify HR before end.
ST D	Notice period tracking	For resignations.
AD V	Internal transfers between companies	Multi-entity moves.
AD V	Employment history timeline	Visual chronological view.

Documents

Tier	Feature	Notes
CO RE	Upload document	Contract, ID, certificate.

Tier	Feature	Notes
CO RE	Read / download document	Permission-checked.
CO RE	Delete document	Audited.
CO RE	Document categories	Tenant-configurable taxonomy.
ST D	Expiry tracking	Passport, work permit, visa.
ST D	Version history	Replace v1 with v2, keep v1.
ST D	Required documents checklist	Per employee, per role.
AD V	Document templates with auto-fill	Generate from data.
AD V	E-signature integration	DocuSign, Adobe Sign.

Org chart

Tier	Feature	Notes
CO RE	Render org chart	From manager_id relationships.
CO RE	Navigate up / down chain	
ST D	Team view	My team, my team's team.
ST D	Headcount aggregation per node	
AD V	Export org chart	Image, PDF.

Onboarding

Tier	Feature	Notes
ST D	Onboarding checklist per role	Configurable per position.
ST D	Task assignment	To employee, to HR, to manager.
ST D	Progress tracking	Visible to HR and the new hire.
AD V	Pre-boarding flow	Before day 1.
AD V	Buddy / mentor assignment	

Offboarding

Tier	Feature	Notes
ST D	Resignation submission	Employee-initiated, with notice.
ST D	Offboarding checklist	Asset return, knowledge transfer.
ST D	Asset return tracking	Laptop, phone, badge.

Tier	Feature	Notes
ST D	Exit interview	Structured form.
ST D	Final settlement coordination	With payroll module.
AD V	Knowledge handover tasks	Document transfer to peers.

Module 4

Attendance

Time, presence, and working hours. The factual record of who was where, when.

Check-in / check-out

Tier	Feature	Notes
CO RE	Record check-in	Timestamped, attributed.
CO RE	Record check-out	
CO RE	Read today's attendance (self)	
CO RE	Edit attendance record	With permission and audit.
CO RE	Delete attendance record	Audited; rare.
CO RE	List attendance records	By employee, date range.
ST D	Multiple check-ins per day	Break tracking.
ST D	Location capture	Lat/long, IP address.
ST D	Device / source	Web, mobile, kiosk, biometric, API.
ST D	Photo capture	Selfie at check-in (anti-buddy-punch).
AD V	Geofencing validation	Reject if outside radius.
AD V	Biometric device integration	Fingerprint, face scan.
AD V	RFID / card reader	Door access systems.

Working time calculation

Tier	Feature	Notes
CO RE	Daily / weekly / monthly hours worked	
CO RE	Hours vs expected hours	Variance to working hour policy.
ST D	Regular vs overtime split	Per policy thresholds.
ST D	Night-shift hours	Tagged separately for payroll.
ST D	Weekend / holiday hours	Tagged for premium pay.
AD V	Break deduction rules	Auto-deduct configured break length.
AD V	Auto check-out at day end	Safety net for forgotten check-outs.

Attendance status

Tier	Feature	Notes
CO RE	Present / absent	
CO RE	On leave	Sourced from leave module.
CO RE	Holiday	Sourced from calendar.
ST D	Late arrival flagging	Configurable grace period.
ST D	Early departure flagging	
ST D	Half-day attendance	
ST D	Remote / WFH marker	
ST D	Business trip / off-site	
AD V	Absence reason coding	Structured reason codes.

Overtime

Tier	Feature	Notes
ST D	Overtime request	Submitted before or after.
ST D	Overtime approval workflow	Manager approves.
ST D	Overtime accrual calculation	Hours, rate multiplier.
ST D	Overtime balance per employee	Cumulative.
AD V	Overtime cap rules	Monthly / weekly maximum.
AD V	Compensatory time off	Convert overtime to leave.

Corrections and regularization

Tier	Feature	Notes
CO RE	Request correction	Forgot to check in/out.
CO RE	Manager approves correction	
ST D	Bulk regularization	HR fixing many records.
ST D	Correction audit trail	Original and corrected values.

Schedules and rosters

Tier	Feature	Notes
ST D	Assign shift to employee	Date range or recurring.
ST D	Roster view	Team's schedule by week.
ST D	Shift swap requests	Peer-to-peer with manager approval.
AD V	Auto-rostering	Algorithmic assignment.
AD V	Shift trade marketplace	Open shifts visible to team.

Reports

Tier	Feature	Notes
CO RE	Individual attendance report	Self, by date range.
CO RE	Team attendance report	Manager view.
ST D	Daily attendance summary	HR view across company.
ST D	Lateness report	Recurring late arrivals.

Tier	Feature	Notes
ST D	Absenteeism report	Unplanned absences.
AD V	Trend analysis	Attendance over time, by team.

Module 5

Leave

The most policy-heavy of the standard modules. Configurability is the moat.

Leave types

Leave types carry policy

Annual, sick, personal, maternity, paternity, bereavement, study, unpaid — each with different rules. The company configures these. OpenHRCore does not ship with hardcoded types beyond a starter set.

Tier	Feature	Notes
CO RE	Create leave type	Name, code, color.
CO RE	Read / update / delete leave type	
CO RE	List leave types	
CO RE	Accrual configuration	Granted upfront / monthly / per anniversary.
CO RE	Default days per year	
CO RE	Carry-forward rules	Max days, expiry.
CO RE	Encashment rules	Cash out unused days.
CO RE	Attachment required flag	E.g., sick needs medical certificate.
CO RE	Gender-specific flag	Maternity, paternity.
CO RE	Min / max days per request	
CO RE	Advance notice required	Days before start date.

Tier	Feature	Notes
ST D	Eligibility rules	Probation period, tenure, position.
AD V	Leave types by location / country	Different sets per jurisdiction.

Leave balances

Tier	Feature	Notes
CO RE	Read employee balance per type	
CO RE	List all balances for employee	
CO RE	Balance breakdown	Granted, accrued, used, pending, available.
ST D	Year-end carry-forward	Automated processing.
ST D	Year-end encashment	
ST D	Mid-year balance adjustment	HR override with audit.
ST D	Forecast balance	Projected end-of-year availability.
AD V	Pro-rata for mid-year hires	Months-worked-based calculation.
AD V	Balance freeze on resignation	No more accrual.

Leave requests

Tier	Feature	Notes
CO RE	Create leave request	From-date, to-date, type, reason.
CO RE	Read leave request	
CO RE	Update leave request	Before approval only.
CO RE	Cancel leave request	Before approval.
CO RE	Delete leave request	Rare; usually cancel.
CO RE	List leave requests	Mine, team, all by permission.
CO RE	Filter by status, date, type, employee	
ST D	Half-day request	AM or PM.
ST D	Hourly leave	Specific hours of a day.
ST D	Attachment upload	Medical certificate.
ST D	Reason / notes	
ST D	Override warnings with approval	E.g., insufficient balance.
AD V	Bulk request	Year-end break across multiple days.

Approvals

Tier	Feature	Notes
CO RE	Approve request	
CO RE	Reject request with reason	

Tier	Feature	Notes
CO RE	Read pending approvals	Manager queue.
CO RE	Approval routing rules	Default: direct manager.
ST D	Multi-level approval chain	Manager then HR then director.
ST D	Delegated approval	When manager on leave.
ST D	Reminders / escalation	After N days inactive.
ST D	Withdraw before approval	
ST D	Recall approved request	Cancellation with policy.
AD V	Conditional routing	By duration, type, level.
AD V	Auto-approval rules	E.g., 1-day annual auto-approves.

Holidays and blackout

Tier	Feature	Notes
ST D	Detect overlap with holidays	Don't deduct balance for holidays.
ST D	Blackout periods	No leave during quarter-close, peak season.
ST D	Team coverage rules	Max N people on leave simultaneously.

Calendar view

Tier	Feature	Notes
ST D	Personal calendar	My leave history and upcoming.
ST D	Team calendar	Who's out when.
ST D	Department calendar	
AD V	Year-at-a-glance map	Heatmap-style visualization.
AD V	Calendar export	iCal feed, Google sync.

Reports

Tier	Feature	Notes
CO RE	My leave summary	
CO RE	Team leave summary	Manager view.
ST D	Leave utilization report	Usage % across company.
ST D	Leave liability report	Unpaid balance as cost.
AD V	Trend analysis	Leave patterns over time.

Module 6

Payroll

The highest-stakes module. Mistakes cost money and create legal exposure.

Build last, defend hardest

Payroll consumes everything before it: working hours from attendance, unpaid leave from leave, employee info, position, salary. Build it last because it depends on everything; test it hardest because it touches money.

Country-specific statutory packs (tax tables, social security rates) are the place to spend most of the engineering attention here. Get the inputs right and the calculation is straightforward.

Salary structure

Tier	Feature	Notes
CO RE	Define salary components	Basic, allowances, deductions.
CO RE	Component types	Earning, deduction, statutory, reimbursement.
CO RE	Component calculation	Fixed, formula, percentage.
CO RE	Read / update / delete component	
ST D	Salary structure templates	Per position, per grade.
ST D	Effective dating	Component value changes over time.
AD V	Custom formulas with variables	Tenant-defined logic.

Employee compensation

Tier	Feature	Notes
CO RE	Assign salary to employee	

Tier	Feature	Notes
CO RE	Read compensation	
CO RE	Update compensation	With effective date.
CO RE	Compensation history	Raises, adjustments, audit trail.
ST D	Salary revision workflow	Approval chain.
ST D	Bonus / one-time payments	
ST D	Currency per employee	
AD V	Multi-currency / FX handling	For expat employees.

Statutory deductions and contributions

Tier	Feature	Notes
CO RE	Income tax withholding	Country-specific.
CO RE	Social security	Employee + employer share.
CO RE	Provident fund / pension	
ST D	Health insurance deduction	
ST D	Other statutory deductions	Union dues, garnishments.
AD V	Tax bracket configuration	Per country, per period.
AD V	Country-specific statutory packs	Thailand, Singapore, etc.

Time-driven adjustments

Tier	Feature	Notes
CO RE	Unpaid leave deduction	Sourced from leave module.
CO RE	Overtime payment	Sourced from attendance module.
ST D	Late deduction rules	Configurable per company policy.
ST D	Attendance bonus	
AD V	Shift differential pay	Night, weekend premiums.

Payslip generation

Tier	Feature	Notes
CO RE	Run payroll for a period	Monthly, fortnightly, weekly.

Tier	Feature	Notes
CO RE	Calculate gross / deductions / net	
CO RE	Generate payslip	
CO RE	Read payslip	Self, by permission.
CO RE	List historical payslips	
ST D	Payslip PDF export	
ST D	Payslip email distribution	
ST D	Payroll preview before commit	Dry run with full output.
ST D	Payroll commit	Lock the period.
ST D	Payroll reversal	Strict permissions and audit.
AD V	Branded payslip templates	

Disbursement

Tier	Feature	Notes
ST D	Bank transfer file generation	Per-bank format.
ST D	Cash payment tracking	
ST D	Cheque payment tracking	
AD V	Direct bank API integration	Where supported.
AD V	Multi-bank disbursement split	Employee splits across accounts.

Reports and compliance

Tier	Feature	Notes
CO RE	Payroll register	Period summary.
CO RE	Employee payslip	
ST D	Tax withholding summary	Per period, per year.
ST D	Statutory contribution summary	
ST D	Year-to-date earnings	
ST D	Annual tax statement	Year-end summary for employee.
AD V	Country-specific filing forms	Thailand: PND, SSO; Singapore: IR8A.
AD V	Audit-ready exports	For external auditors.

Loans and advances

Tier	Feature	Notes
ST D	Salary advance request	
ST D	Advance approval and disbursement	
ST D	Advance recovery from payroll	
ST D	Employee loan management	
AD V	Loan amortization schedules	Interest, principal.

Reimbursements

Tier	Feature	Notes
ST D	Expense reimbursement request	
ST D	Receipt attachment	
ST D	Approval workflow	
ST D	Payment via payroll	
AD V	Travel expense categories	Per-diem rules.

Final settlement

Tier	Feature	Notes
ST D	Calculate final settlement	On resignation or termination.
ST D	Severance pay	Per country statute.
ST D	Notice pay	
ST D	Leave encashment	

Tier	Feature	Notes
ST D	Outstanding loan recovery	
AD V	Gratuity calculation	Country-specific.
AD V	Country-specific severance rules	Thailand LPA §118 tiers, etc.

Cross-cutting concerns

These show up in every module. Plan them as platform-level capabilities, not features of one module.

Notifications

Tier	Feature	Notes
CO RE	In-app notifications	Bell icon feed.
CO RE	Email notifications	Templated per event.
ST D	Notification templates per event	Multilingual.
ST D	User notification preferences	Per-channel, per-event.
AD V	SMS, LINE, Slack, Teams	Per-channel adapters.

Workflow / approval engine

Tier	Feature	Notes
CO RE	Configurable approval chains	Per workflow type.
ST D	Multi-step approvals	Sequential stages.
ST D	Conditional routing	Branch by attributes.
ST D	Delegation	Temporary handoff.
ST D	Escalation	Auto-escalate after timeout.
AD V	Parallel approvals	Multiple approvers same stage.

Reporting and exports

Tier	Feature	Notes
CO RE	CSV export per list view	From every grid.
ST D	PDF export for documents	Payslip, leave letter.
ST D	Scheduled reports	Email me weekly.
AD V	Custom report builder	User-defined queries.
AD V	BI tool integration	Metabase, Tableau, Power BI.

Integrations

Tier	Feature	Notes
ST D	Webhook outbound events	Subscribers receive domain events.
ST D	REST API for all operations	OpenAPI-documented.
AD V	SSO providers	Google, Microsoft, Okta.
AD V	Accounting system sync	Payroll → general ledger.
AD V	Calendar sync	Leave → Google / Outlook.
AD V	Comms tool integration	Slack, Teams, LINE.

v0.1 scope — what ships first

The first public release. Core tier only, four modules.

v0.1 is the smallest release that proves OpenHRCore's thesis end to end: feature-first architecture, AI-native interface, agent parity with UI, and a working HR core that a real small company could use. Everything in v0.1 is core-tier; standard and advanced features are deferred.

In scope for v0.1

Out of scope for v0.1

Explicitly deferred to keep v0.1 shippable: attendance module, payroll module, onboarding / offboarding workflows, document expiry tracking, shift schedules, overtime, country-specific statutory packs, SSO, MFA, webhooks, scheduled reports, mobile apps, multi-company / multi-entity.

Phasing roadmap

v0.1 through v1.0. Realistic at sustained part-time pace.

A note on the dependency direction

The roadmap respects HRMS dependency order. Admin and company are the skeleton; employee attaches to them; attendance and leave attach to employees; payroll consumes everything. Build out of order and you refactor downstream modules later. Trust the order.

Glossary

Agent tool	A function the AI agent can call. Thin adapter over a service method.
Agent runtime	The fnagent-shaped loop that drives the agent: call LLM, execute tools, append results, repeat.
Audit log	Append-only record of every state-changing action: who, what, when, before, after.
Core tier	Features without which the module is not useful. v0.1 includes all core features of the modules that ship.
Effective date	The date a change takes effect, distinct from the date it was entered. Critical for compensation and policy changes.
Encashment	Converting unused leave balance into cash payment, typically at year-end or resignation.
fnagent	The agent loop library, code-shape used inside OpenHRCore. Sealed in platform/agent_runtime/, potentially extractable later.
Service layer	The single source of truth for what the system can do. Holds business logic, validation, permissions, events, audit calls.
Standard tier	Features expected by any production HRMS. Ships v0.2–v0.3.
Statutory pack	Country-specific payroll and tax rules bundled as a versioned, replaceable module.
Vertical slice	Folder structure where one feature owns everything related to it (router, service, repository, models, schemas, tools).

End of document

This catalog is the planning surface. Keep it. Refer back as you build. When you complete a feature, mark it done in your tracker. When you discover a missing feature mid-build, add it. Treat this as the source of truth for OpenHRCore's intended capability set.
